

# **METHAMPHETAMINE...** **RECIPE FOR DISASTER!**

Many of the ingredients used to make meth are deadly. Drain cleaner, brake fluid, flammable and volatile solvents such as methanol, ether, benzene, methylene chloride, trichloroethane, and toluene. And that's just for starters.

When users smoke, inject or snort meth, they are sending these ingredients to their brain, cardiovascular system and throughout their bodies. Any one of these ingredients can be dangerous, and when combined, it's a recipe for disaster.

# SPEED

# METHAMPHETAMINE

No matter what you call it...

Crank, crystal meth, speed, hillbilly heroin, grit...it doesn't matter what you call it, meth use can be devastating, and even deadly. For starters, meth use causes mental confusion, severe anxiety, and paranoia. Meth users are also very aggressive and paranoid which often results in violent behavior, domestic violence and child abuse. It doesn't have to be that way. If you, or someone you love, is caught up in the haze of meth abuse...
